WELCOME

Congratulations! You've taken a huge step towards protecting your yard / garden from moles, voles, groundhogs & other burrowing pests.

With your purchase of the YardShielder by HomeShielders, you're now a few short weeks away from never having to worry about these burrowing pests again.

This guide will show you how to properly install the units, and share some tips that will accelerate your results with this product.

So without further ado, let's get into it!

HOW IT WORKS

With YardShielder device, you can keep your yard mole and gopher free without poison. So how does it work? Every 30 seconds, sonic pulses penetrate the soil, emitting a frequency with is irritating to burrowing pests.

Moles and gophers are virtually blind and extremely sensitive to sound and vibrations, meaning they will be discouraged from remaining on or returning to your property while this method is active

One full solar charge will last up to 5 days to keep protecting your yard even during a few days of overcast skies. No batteries are required to operate the YardShielder, so you never need to worry about changing dead batteries.

For your convenience, each YardShielder device offers up to 7,500 square feet of coverage, providing plenty of coverage for many backyard settings. The sonic frequencies radiate from the spike in a circular pattern, approximately 95 feet in diameter.

HOW TO USE

Simply follow these four easy steps to protect your yard from burrowing pests.

- 1)** Use a wood stake or steel rod to make a pilot hole prior to inserting spike into the ground. Do not use a hammer or excessive force as doing so may cause damage to your unit. Make sure that the solar panel is free of dirt and free of snow / ice during the winter months. This can cause the performance of the solar cell to diminish.
- 2)** Insert the spike until the bottom of the spike head touches the ground. It needs to be surface level to prevent it from being tripped over or hit with a lawnmower.
- 3)** To activate the spike, slide the switch to the “ON” position.
- 4)** For best results, we suggest keeping each unit 80 feet apart from each other. The more units that are used, the more disturbed environment you will create for the pests, forcing them to leave.

HOW TO USE

IMPORTANT TIPS FOR BEST RESULTS:

- You may need to leave the unit out in the sun to charge for 2 days. Ensure that the product is turned OFF when initially charging.
- Do not place the unit in a tunnel or mole hole - insert unit in the area with the least damage.
- When using several devices, never place all the devices at each corner of the protected land. Make sure you leave a way for pests to evacuate. Not doing this can cause the pests to appear in the middle
- Act tactically: begin at the house and work your way towards the boundary of your garden.
- Think about the underground "barriers" when inserting your device, such as pipes, foundations, flowerbed borders, and concrete slabs: these slow down the sound waves.
- Removing YardShielder units when flooding may occur or ground may freeze.
- Effectiveness depends largely on soil type: dry, sandy or peat soil does not conduct the sonic waves easily. Moist clay is the best conductor of sound.

HOW TO USE

- Typically, YardShielder units must be used constantly for 7-14 days before ground rodents start to move away from the affected area.
- You may notice increased pest activity at first. This is quite normal. This indicates that the burrowing rodents noticed a change in their environment and want to find a new ultrasonic-free environment to live. The rodents find this ultrasonic noise extremely irritating and eventually move to more quiet surroundings.

TROUBLESHOOTING

If you have any questions about your order, or want to reach out to us for help - don't hesitate to reach our customer care team at support@homeshielders.com.

We're a small family-owned business and take pride in providing a 5-star experience to every customer who supports us.

On the next page you'll find some frequently asked questions by our previous customers.

FREQUENTLY ASKED QUESTIONS

How long do I need to keep these in the ground? I didn't realize they made audible noise (to humans).

We recommend leaving the spikes in place to continue to deter target animals from returning to the area.

I am putting the spike in a plant bed so do I have to bury the spike up to the solar panel since I will not be walking or mowing in that area? What is the most effective depth.

This product should be buried up to the base of the solar panel.

How many feet apart should I position 2 stakes?

Spikes may be placed up about 80 ft apart for maximum coverage. The more devices used in and around your garden, the more intolerable of an environment you create for the pests which forces them to leave.

How do you change the battery?

The battery in the solar powered spikes is not replaceable.

FREQUENTLY ASKED QUESTIONS

Rechargeable battery dying after just two seasons. Is there a way to open and replace the battery on the solar version?

The batteries for the solar-powered spikes are integrated into the units and are not replaceable.

I want to order more units to maximize my protection, can I get a discount?

Yes you can :) [Visit the YardShielder product page using this secret link](#) which will give you 20% discount on your order (regardless of # of devices you order). This discount code will automatically be applied and reflect on the checkout page.

SPECIAL \$30 GIFT JUST FOR YOU

As a small company, reviews are the lifeblood of our business. We would love to hear your feedback on your results with this YardShielder.

If you would be kind enough to give us your feedback using the link below, we will reward you with a \$30 gift card you can use toward any future purchases on our HomeShielders store!

Thank you for supporting us, we really appreciate it!

FINAL WORDS

When HomeShielders was born in 2015, we wanted to create a company culture that deeply cared about every one of our customers.

We understand how frustrating it can be to have a pest or animal causing you sleepless nights.

But we didn't want to use poisons, traps, or other harmful methods that torture any pest or animal. Nor do we believe in doing "trial and error" with DIY methods that only work for a short period of time.

We also wanted to find a more effective (long-lasting) solution compared to spending thousands of dollars on a local pest control extermination service.

Today - we have served over 400,000 customers and intently listened to the feedback of each and every person who reached out to us.

From this feedback, we've designed humane, eco-friendly products that are available exclusively through our online store.

We're an eco-friendly company that wants to make a dent in the universe by supporting a greener, eco-friendly & healthier planet for all future generations.
